HERCULES PRIME

The modular rehab car seat that grows
with the user for a very long time

Hercules Prime

” A strong solution is needed for children, young people and adults with physical and neurological disabilities — so that they are always safe in the car.

Hercules Prime has its great performance when rehab car seats have become too small or more support is needed when sitting in the car. As a modular positioning seat that grows with the user, it offers the familiar functions of a rehab car seat and can be very individually adapted with a large selection of accessories that grow with the user. When more support for the head and upper body is needed, a simple belt system in the car is not enough.

For a good, safe sitting position on every journey. “

Always
recommended for
**all diagnoses that
include limited
trunk control**

Thomashilfen has been providing children with special needs with rehab car seats for over 30 years. Today we also use our know-how to develop our own rehab car seats for children and adults. They incorporate all our many years of experience around the needs of users and their relatives.

III-V

BACKREST HEIGHT

With the infinitely variable height adjustment of the backrest by 25 cm / 9.8", it is possible to adapt to the user's growth at any time.

The head is supported in an optimal position.

The large selection of accessories that grow with the user allows for a long service life.

BELT GUIDE

for the 3-point safety belt of the vehicle can be used either on the right or left, the positioning seat can be fastened quickly and easily.

LATERAL TRUNK SUPPORTS

support the upper body as an individually adjustable accessory. Further accessories that grow with the user are available to support and position the upper body.

CROTCH PAD

reduces the pressure of the belt buckle on the sensitive abdominal area and conceals the belt buckle.

BELT BUCKLE

Shoulder straps can be separately clicked into the quick-release fastener, which means easier buckling for the carers.

5-POINT-HARNESS

Soft shoulder pads provide additional support and a good sitting position during the ride — the correct strap length is quickly adjusted on the two buckles.

UPHOLSTERY

Thick upholstery for comfortable sitting without annoying sweating, the breathable cover can be completely removed and washed at 40° C.

SEAT DEPTH

infinitely adjustable by 8 cm / 3.1", individual adaptation to the growth of the user.

HEADREST

for good positioning of the head and secure, reliable hold.

SIDE IMPACT PROTECTION

absorbs energy in the event of lateral collisions.

BACK HEIGHT

can be adjusted infinitely, so the seat adapts to the user and allows a long supply time.

BACK ANGLE

can be adjusted to the backrest with two quick steps — no tools required, just use the red quick release lever.

SEAT CUSHION

offers a wide seat surface (38 cm / 15") for large users and makes it easier to get in and out of the seat. Transfer for parents and care givers is also made easier and is easy on the back.

ACCESSORIES individual, comfortable & grow with user

► Functional bases

SWIVEL FUNCTION

facilitates the transfer, the positioning seat can be turned to the left or right.

In order to be able to cope with the transfer of the increasingly heavy users with special needs, the swivel function is a real relief for the back of the care givers. The rotation can be changed from left to right. The release button is mounted in the front area to ensure easy release.

TILTING FUNCTION

allows seat tilting in several steps for a relaxed resting position while driving.

In cases of weak upper body and head control (hypotonic, "floppy"), the adjustable seat tilt-in-space is an important support to prevent "tipping forward". The user sits in a relaxed resting position and does not have to do any strenuous holding work. The appropriate angle can be adjusted as required.

► Stability for the rehab car seat

SEATFIX (behind the seat)

keeps the seat securely in place during the journey, even without a user.

STABILIZING BOW

ensures that the seat is held securely in place when no Isofix is available.

STAND

guarantees stable hold of the seat in the foot area.

Especially when using the swivel and tilting function, the positioning seat is exposed to additional strain in daily use. Helpful accessories should be used to stabilise the positioning seat in the car — for better handling and more safety for users and carers.

► Secure support for head & feet

HEADREST

for good positioning of the head and secure, reliable hold.

SECOND BELT GUIDE (top)

as a convenient option for using the 3-point safety belt either on the right or left side.

FOOTREST (foldable)

helps getting in and out of the seat and prevents slipping out of the seat. (height and angle adjustable)

► Precisely adjustable seating comfort and optimal support for individual needs

LATERAL TRUNK SUPPORTS (firm)

provide firm lateral support and support the thorax.

LATERAL TRUNK SUPPORTS (swing-away)

provide firm lateral support for the thorax and facilitate the transfer.

UPPER BODY GUIDE (firm)

provide firm lateral support over a large area and support the upper body.

UPPER BODY GUIDE (swing-away)

provide firm lateral support over a large area of the upper body and facilitate the transfer.

ABDUCTION BLOCK

improves leg guidance and prevents the legs from crossing over.

LEG GUIDES (left and right)

support a stable sitting position and also provide the necessary support for the thighs.

THE INCONTINENCE SEAT COVER

is placed on the seat cushion. It protects the cover from moisture, so the cover stays clean for longer.

► User & vehicle safely protected

FRONT COVER

protects the legs and prevents chafing on the seat depth plate.

CHEST CLIP

stops dangerous twisting of the straps and ensures that the straps stay in place.

CUSHION FOR FUNCTION BASE

ensures maximum contact surface between vehicle seat and function base for easier transfer.

CAR SEAT PROTECTION MAT

with back protects the vehicle seat and offers 3 practical pockets for small items in the front.

IN EVERYDAY USE

Adjust the positioning seat when placed in the vehicle.

In maximum back height there should be a distance of at least 5 cm / 2" between the top of head and the roof of the vehicle to ensure that tall users can still sit comfortably.

LARGE BECOMES SMALL & HANDY

The large positioning seat can be quickly folded to a small, handy size in a few simple steps.

This not only facilitates installation in the vehicle. — The positioning seat can also be easily transported in small cars and can be stowed away to save space.
